

Fossil Dot-to-Dot

Starting at number 1, can you connect the dots to draw this commonly found fossil? Do you know what type of fossil this is?

The group of animals that made these fossils are called ammonites. Ammonites lived in the seas on Earth and the last ammonites went extinct around 66 million years ago! Once you have finished your drawing, you could try colouring it in.

What colours do you think these animals might have been?
